

Discussion Points

1. Sustainability assessment (environment, social and economic) and resilience assessment (chronic stress and acute shocks) for communities
2. Health and well beings – individual matter related to urban environment
3. Use of new technologies, Internet of Things
4. How can Urban Sustainability Assessment Tools be applied to urban regeneration in Japan? – Large scale redevelopments and incremental community initiatives
5. How can we design an interface of assessment between different spatial scales? – district, city and region / bottom-up and top-down
6. Investment to districts, the possibility of green bond (not only to individual buildings)
7. Professions in urban sustainability assessment
